RE: IMPROVED SMOKING COMPOSITIONS
D&O-79-19 PM 703

Dear George:

I have been asked to call your attention to an invention record by W. G. Chan, docketed by us as PM 942 (copy attached), which has some relationship with the above-named case on which an application is nearing completion. The common subject matter is that the agents may release, among other things, nicotine or related alkaloids. The agents themselves are quite different and they release pyrolysis products by different mechanisms.

Very truly yours,

GEI
